W. A. LOVEJOY, TOBACCONIST! Deals in both FINE CUT AND SMOKING TOBACCO, Snuff, Pipes, &c., AT NO. 7 EAST HURON STREET, Next to the Express Office.

THE BURIAL OF THE DANER.

Blue glow all around us, Blue sky overhead, Master all the grandeur! We must bury the dead!

It is but a Danish soldier, Ranged of front and form; A common son of the forehead, Graced with sun and storm.

His name and the strand he hailed from, Was none other than the Daner; But perhaps his mother is waiting On the lonely Island of Fihl.

Still as he lay there dying, Reason drifting away, His my watch he would mutter, "I must go upon deck!"

Are, on deck by the foremast!— But watch and look-out are done; The Union Jack laid over him, How quiet he lies in the sun!

Stand in order and listen To the holiest pages of prayer! Let every foot be quiet, The soft trade-wind is lifting A hundred lullabies fair.

Our captain reads the service, (A little rest on the cheeks), The sea is calm and the wind is soft, And the great true heart seeks— "We therefore commit his body To the deep,"—and, he speaks!

Launched from the weather railing, The ghostly shrouded hammock, Flung, a stray from shriek, Down into the sea below!

A thousand summers and winters The stormy Gulf shall roll High o'er his grave cold, There's quiet harbor-somewhere For the poor weary soul!

Free the fettered shunt! Speed the tireless shaft! Leave to gallant and to valiant, The breeze is fair at last!

Blue sky overhead! Every man to his duty! We have buried the dead!

AN OLD BACHELOR'S STORY. I am an old bachelor. At sixty-five I can say that I never shall be anything else while I live; but, like all other men, I have had my moments of hope.

That passion and those hopes faded forty years ago. Since then I have done penance for the lusty act of one night; I have shunned the society of women, and forbidden myself that which I wished that I might have myattered hopes with new light.

To none who knew me have I ever told the tale. I should have been esteemed a lunatic, or a man of a very peculiar disposition, if I had done so. I have never known a woman who would willingly accept such a reputation. To my unknown reader, I dare recite the events of those forty and twenty hours which turned my life into its now well-known history.

At the age of twenty-four, I was eloped in the establishment of Messrs. Carp & Cavill, lawyers. I had energy and ability, and health and opportunity—everything in fact that could be wished for by a man who hoped to light his way up in the world, and win wealth and reputation.

I was engaged to a young lady by the name of Grace Hunter, a pretty, delicate creature, so quiet that her pet name, Snowflake, seemed the only one suitable for her. Her step was noiseless, her movements soft, her voice sweet and low. She was more than man can see, and her conversation, nor did any of those things that give a woman the reputation for brilliancy; but her mental powers were very fine, and in a *tele-tele* she was enchanting. A lady to her beauty, she might have been forgotten by most men in a room full of giggling, chattering girls.

I adored her. I had felt that her love was a jewel worth of an emperor's wearing, and I scarcely dared to utter the words that told her all I felt. Even now her high-bred reserve kept me at a little distance. I was proud of her. I held her more than man can see, and her conversation, nor did any of those things that give a woman the reputation for brilliancy; but her mental powers were very fine, and in a *tele-tele* she was enchanting.

When I recovered the day had dawned, and under the blue morning sky the city had awakened, but my day never dawned again. My heart never awoke to life's sweetness.

To tell this story in a very few words, Grace Hunter never reached her home that night, and never was heard of again. The family imagined that she had been spoiled by her friends, and were not at all surprised when she failed to appear the next morning. I had left her written note in my own door, and why she didn't reach it I shall never know. But I do know that, in some woful manner, she died that night, and that her parting spirit passed in its flight to bid me a long farewell.

I have outlived my youth, and the suspicion that fell upon me, and embittered many years of my existence, but I never shall outlive my love for Grace Hunter. I shall never outlive the knowledge that, in the madness caused by wine and an evil woman's enchantment, I was the cause of my darling's death.

The Dress of Civilized Women. I do declare that I think it would be better to die and get out of torment at once than to rise every morning for forty years, and box one's body in a sort of compressive armor, half weights to the head, which are supported by the roots of the hair; put one's feet in shoes, a number too small, the wrong shape, and with heels like stilts; and then set about doing the whole duty of a woman with a cheerful face and airy air, for from fifteen to seventeen hours out of the twenty-four! That there are many women who are not frightened into a decline at such a prospect, and that they bravely undergo it, I do not deny. But I think that women that with such disadvantages they can work side by side with unskilled men, and that they do not die in trying to do it, certainly say much for their courage, but very little for their common sense.

A man's dress to a great extent is fashioned for comfort. He has contrivances for suspending the weight of his clothes from his shoulders. If the coat collar, button himself up snugly, slouch his hat over his eyes, thrust his hands into his pockets and brave the weather. But imagine a woman removing her hat or bonnet, and she is left to the weather. She must wear it, on account of the weather, or turning any of her "fixtures" up to protect her neck and throat, or buttoning anything that was unbuttoned before, or stitching her hands into her pockets! She would be taken for an improper character, or a lunatic, or a woman who should be confined in an asylum; should she endeavor by any unpropitious arrangement of her habiliments to save her health.—Science of Health.

FOREIGN CORRESPONDENCE.

Discoveries among the Ruins—Basilica of Constantine—The "House of Julia." ROME, Jan. 17, 1873.

FRIENDS: Having given a brief sketch of some of the more important ruins in the excavated portion of the ancient Forum, which, though so sadly wrecked and the figures, present to the eye a scene of ruin and picturesque beauty, it only remains to add that scattered about within the same limited area is a vast quantity of the fragments of these ancient edifices.

Many of them still exhibit in perfectly sharp outline the details of beautiful sculpture with which columns and friezes and architrave and pediment were once ornamented, and of such amazing proportions that we are lost in wonder at the magnificence they indicate.

Broken statuary of classic beauty, forming parts of life-size and colossal human figures—as also remains of decorations of animals and reliefs and inscriptions—are standing everywhere, separated from the less valuable dirt and debris which have been carried away. Of course all objects not hopelessly destroyed or imperfect, if not too cumbersome, have been carefully restored and deposited in the Capitoline and Vatican Museums.

Among these have been set up in the Forum itself, apparently, the section of a heavy balustrade and entire in itself, though other sections adjoined it undoubtedly, of which one-half of another has been found quite perfect. It is about ten feet long by five in height, and is ten inches in thickness, of grayish marble. Upon one side are large bas-reliefs of a boar followed by a ram and behind this a bull, all executed in the highest style of art, and portraying splendid specimens of the animals represented. It competitors for first prizes at our modern fairs. Especially is this true of the boar and bull, and strange to say they do not resemble anything of their kind we have seen alive in Italy, the hogs here resembling what were termed the wild swine in Indiana, with long snout and legs, and the cattle invariably bearing the great wide-spreading horns of the Texas wild cattle.

Upon the reverse side is a representation of a procession of people, embracing a variety of expression and attitude, and of the same fine workmanship. The upper portion of either side shows the pediments of two temples and of other buildings.

Between the column of Phœbus and the Via Sacra appear the bases either of similar columns or of statues of eminent Romans, seven in number, following along this street and opposite the Basilica Julia. They are of very solid construction, about fourteen feet square and six high, and through an arch formed by the fifth passes the branch sewer across the Forum. The space fronting the Rostrum and the Arch of Severus appears to have been quite open, with the exception of the column of Phœbus, which is comparatively modern, and the bases referred to, as far eastward on one side as the Basilica of Julia extended on the other side of the Via Sacra. This was the great gathering-place of the popular assemblies which could be addressed either from the Rostrum near the Arch of Severus or in earlier times from the more ancient Rostrum situated upon its north side, as is supposed, a portion underneath the modern street and not yet excavated. This being the present condition of the excavated area, it remains to briefly indicate from our position upon the elevated street before named the ancient ruins that are to be seen about this open space.

At our left (as we look from this point toward the Temple of Castor and Pollux) the street continues for some six rods and passes in front of the Mamertine Prison, which lies beneath the present church of St. Giuseppe di Falgarnani. It is interesting to note that the site of the prison was on an exhibition on board the betrayed Atlantic.

MARK TWAIN. Hartford, Conn., April 8, 1873.

The Curse of Drink. The appetite for strong drink in man has spoiled the lives of more women than it has ever spoiled of men. It has made more men than it has ever made of women. It has made more men than it has ever made of women. It has made more men than it has ever made of women.

There are women by thousands who dread to hear at the door the step that once led them with pleasure, because that step has learned to reel under the influence of seductive poison. There are women groaning with pain, while we write these words, from bruises and brutalities inflicted by the hands of men who have been made drunk by drink. There can be no exaggeration in any statement made in regard to this matter, because no human imagination can create any thing worse than the truth, and no pen is capable of portraying the horrors of a woman who has been made drunk by a drunken husband, or a mother with a drunken son, as we near the realization of hell as can be reached in this world at least. The shame, the indignity, the sorrow, the loss of honor, the disgrace for herself and her children—the poverty, and not unfrequently the beggary—the fear and the fact of violence—the lingering, the life-long struggle, and the despair of countless women with drunken husbands, are enough to make all women curse wine, and engage unitedly to oppose it everywhere as the worst enemy of their sex.—Dr. Holland.

A police judge in Cincinnati fined a woman \$25 for being drunk, and gave the public a bit of valuable information in passing sentence, to the effect that such characters can always say their fines.

In those Congressional districts where the back-pay grab congressmen are indulged, the question in future will not be, "Is he honest?"—is he capable?" but "How long is his arm?"

THE CURSE OF DRINK.

UTILIZING WATER FOR PURPOSES OF LIGHT.

The man who has set the Thames on fire has made his appearance in England. His name is Ruck. He has, it is claimed, perfected an invention for economically utilizing the hydrogen in water for purposes of light and heat, a result long sought by a quality equal to sixteen candle power, and ready to dissolve its alliance. It is then passed into a retort filled with incandescent coke and iron fragments. The oxygen is taken up by the iron, and the hydrogen passing through the retort, is then passed into a retort filled with incandescent coke and iron fragments. The oxygen is taken up by the iron, and the hydrogen passing through the retort, is then passed into a retort filled with incandescent coke and iron fragments.

FRIDAY MORNING, APRIL 25, 1873.

If you wish to have your Probate or other legal advertising done in the Argus, do not forget to ask the Judge of Probate and Circuit Commissioners to make their orders accordingly. A request will be granted.

Local Brevities.

Advertises in the Argus.
- Much mud in Huron street.
- Ditto ditto in Main street.
- The country roads are horrid.
- Trying to snow this afternoon: Thursday.
- Early flowers are having a sorry time of it.
- Equally out of time: spring goods and ice advertisements.
- Order your Bill-Heads, Letter-Heads and Stationery at the Argus office.
- W. E. ANDREWS, of Pittsfield, goes to Colorado next week—health seeking.
- HENRY GOODEY has been on a prospecting trip through Nebraska, Colorado, and Kansas.
- "I look out for a run of sleighing" that was the word passed along the line on Monday evening last.
- The Register has changed its publication day from Friday to Wednesday. Decidedly a sensible move.
- Work is progressing on the University Hall, and the same is to be ready for use at the Commencement.
- W. W. WITZMAN and family have left home with their faces to the west. Their present address is Paris, poste restante.
- If you propose to take the lamented GIBBY'S advice and "Go West," buy your railroad tickets at the Argus office.
- Dr. MACDONALD preached to a very large congregation in the Presbyterian Church on Sunday evening last, giving general satisfaction.
- R. F. FRANK, Esq., has just returned from a flying visit to Kansas. He does not seem to think that land of promise much ahead of Michigan.
- Rumor says the Marshal was favored with a hummer's serenade a few evenings ago: only he had moved and somebody else got the benefit of it.
- A. W. McALVAY, late of this city, was nominated for County Superintendent of Schools by the Republicans of Manistee county, but refused to accept.
- Four inches of snow Tuesday morning, April 22nd, in the year 1873. Now let no more sleighers be peddled at the expense of Alaska, Greenland or any other Polar region.
- There has been another failure at Manchester. This time ABRAHAM PULVERIS goes under, with large liabilities, limited and unknown assets, and unfortunate endorsers.
- G. W. HAYS, Esq., of the Ann Arbor Trading Association, is now in New York, purchasing new spring goods. Look out for some nice goods cheap for cash, as they will sell only for cash.
- If there is a city ordinance against throwing all the rubbish from yards, gardens, and cellars into the street, the Marshal would do well to enforce it. If no such ordinance exists the Council should make haste to enact one.
- Men are again at work on the line of the Toledo, Ann Arbor and Northern Railroad, and the track is to be made ready for the iron at the end of the week.
- Dr. H. S. CHEEVER, of this city, left for the west on Wednesday, and will spend the summer months in Colorado, his first stopping place being Greeley. We hope that his health will improve with the change of climate.
- A young man made haste to jump on to the Dexter train going east Tuesday morning, and discovering that he had left his satchel behind he made haste to get off again, and jumping measured his full length in a bed of soft mud.
- Dr. WOODRUFF of this city is canvassing SEWARD'S TRAVELS AROUND THE WORLD, a book which we noticed at length some time ago, and in a volume of information and interest, the author having enjoyed unusual and extraordinary adventures.
- Dropping into the Circuit Court on Monday we noticed a "country lawyer" with both feet on the table and a cigar in his mouth, engaged in examining a witness. Respect for the dignity of the Court if not self-respect ought to have kept him from so doing.
- The lecture given by Dr. GEORGE MACDONALD—the last in the S. L. A. course—on Friday evening last, was attentively listened to by a large audience. The Scotch brogue of the lecturer and a manner peculiar to himself made close attention necessary, which was given without regret. In discussing of JOHN MILTON he made it a point to incite some noble topics.
- The New County Atlas.
- We wish once more to impress upon our readers the importance of encouraging Messrs. EVERTS & STEWART in their endeavors to publish an Atlas Map of this country. The more we learn of the extent and completeness of their work and become acquainted with the firm and its enterprising agents, the more sanguine are we that this is the map for the citizens of Washtenaw County to support. We feel fully convinced that these men mean just what they say in their letter to the public, and that such an Atlas can only be produced by earnest and energetic labor and the outlay of many thousand dollars.
- The wealthy counties of southern Michigan are, and are bound to have new farm maps, and if a good one is not accepted a miserable affair like our old map is liable to be imposed upon. This is strictly a local enterprise and should awaken a different interest from the variety of maps being distributed throughout the country, and which are constantly in the market. Added to the County Map from the State of Michigan, the United States and the State of Michigan, of latest date. Our neighbors of Lenawee and Jackson are earnest and emphatic in their support of these gentlemen and their complete and perfect Atlases, and we trust they will not drop this county, as they have already thought seriously of doing, in favor of the neighboring counties above mentioned, which they think give them a special recognition. We are pleased to hear that during the time they are engaged upon the field work of this and the adjoining counties they will make our city both their headquarters and home.
- We are sorry to hear that the agents of a State Atlas advertised in our columns are throwing cold water on this enterprise, and insinuating that the promises made by Messrs. EVERTS & STEWART will not be kept, or that their Atlas will be inferior to none. Such insinuations are unwarranted and should be disregarded. The State map does not necessarily conflict with the County Atlas, and if it does the citizens of Washtenaw County should give preference to the County Atlas, which we can assure them is deserving their subscription. We would not feel called upon to give place to this advertisement but for the ill-timed, discourteous and unprofessional "caution" appended to the advertisement referred to.
- Let dogs delight to bark and bite
- For 'tis their nature—
- Lines which we commend to our contemporaries of the Courier and Register. We might have better quoted, but then neither party would thank us to insinuate any brotherly feeling or duties.
- There was an adjourned term of the Circuit Court on Monday last, and provincial and county attorneys (or some of them) had a "heap of trouble" over the stubborn fact that they had been deemed to put up for an indefinite period but for the ill-timed, discourteous and unprofessional "caution" appended to the advertisement referred to.

May Magazines.
"The Insanity of Cain" is the suggestive title of the most remarkable article in the May number of Scribner's Monthly, and one which is destined to attract wide attention. It is a story of a man and a woman, a weird little poem by Miss Maria B. Oakley, with a decoration by the author; Mr. Rhodes' article on Gavami, the John Leech of France, illustrated by some of the best engravings that have lately been made in America; Stirling's paper on "Our Great Art Travelers," with a number of lively illustrations, and of John and the Cuban, a graphic by means of pen and picture, a good idea of the situation in that unfortunate island. Miss Ledyard's designs accompanying Mrs. Walker's amusing story are very bright, and the Japanese pictures in the Etchings are as funny as the letterpress descriptions. We find a fine critical paper on Walter Savage Landor, by Edmund Spenser, and some timely hints on "The California Journey," by Susan Coolidge; an interesting account of the Civil Service Reform; the last part of Saxe Holm's story, "The Elder's Wife," a bright little sketch by Kate W. Hamilton, called "A Novel Spoiled"; the continuation of Dr. Holland's story, Arthur Bonastie; poems and translations by J. T. Rowledge, George Macdonald, Dana English, and others; Dr. Holland's Topics of the Time are entitled, "The Shal Kill, Mitigating Circumstances, Cruelty to Men and Women, and Civil Service Reform. The Old Cabinet contains Reckless Moments, and a couple of sonnets in the Italian manner. In Home and Society are Our Old Books and Scribner's Library, and the California Journey. In Culture and Progress there is a brief paper by Col. Higginson, in which he quotes the opinions of various educators in regard to his proposition as to Inter-Collegiate scholarship, and also an excellent account of English Parliamentary Rules and the late Ministerial Crisis. SCENES AND CO., New York.

The Electric for May is an exceptionally good number. It has no less than fifteen papers, scarcely one of which is not above the average; and, in addition to these, the four Editorial departments present the reader with the freshest and most important information in the literary field at home and abroad, in science and art, and in miscellaneous matters. The table of contents is as follows: The Works of Thackeray, Lord Lytton, Halloway's Manifestations, The Skin—A Novel, South-Sea Slavery Kidnapping and Murder, Balli-Scholar, Edward Wortley Montagu, The Antarctic Regions, German Novelists, A Winter Fable, Problems of Civilization, The Nature and Authority of Miracles, Bring me Word How Tall she is, The Aryan Races of the World, in Three Hard Times, Oliver Wendell Holmes, of whom there is a fine portrait. Dr. R. P. KELTON, 105 Fulton Street, New York.

The Atlantic has an unusual number of brilliant and striking illustrations—pictures in which artist and engraver have vied with each other. First, The Sea Shore, a spiritual and powerful marine view, by M. F. H. de Haas, and his finest effort. Winds and waters have combined or separated to form a good ship from her canvas and upon a terrible sea shore, and the painter makes an attempt in vision the fate of the Atlantic. Then come, The Unbidden Guest, after the original of Mougint, a picture in contrast strange with the preceding; A Trout Brook, by Cassier; Six illustrations of New Orleans, The New Postoffice, Pacific Hotel, Michigan State and Rock Island, and the Depot, Chamber of Commerce, and Times and Tribune buildings, a series marking the wonderful work of but little more than a year; and then, The Drunken Fall, a noted fall in Thuringia, with other pictures. The table of contents includes Mr. Bonnell's Match-making, an amusing sketch, by Miss Lucy Ellen Guesney; Pierre's Chime, a story of French romance, by Miss Kate Putnam Osgood, with attractive sketches, poems, etc. A capital number. JAMES SUTTON & Co., New York.

The Atlantic has: The Two Letters, by Lucretia P. Hale; A Legend, by M. C. T. Child-Life at the Isles of Sheals, by Celia Thaxter; The Trodden Path, by B. W.; The Presidential Campaign of 1793, another of Parson's capital fiction papers; The Goal of Spring, by Jas. F. Colman; A Chance Acquaintance, by W. D. Howells; A Prayer in Weakness, by M. B. C. Cruise through the Galapagos, by E. G. Agassiz; Emanuel von Fallens and his Self-governing College, by Robert Dale Owen; Specie Resumption, by Sam. R. Reed; Henry Howard Brownell, by Thos. B. Aldrich; My Railroad Fight in and out of Court, by John A. Coleman; Sanderberg, by Henry W. Longfellow; and a characteristic poem; full Literary, Art, Music, and Science Notes; with a political paper on Possibilities of Political Reform. JAS. R. OSGOOD & Co., Boston.

Our Young Folks—from the same house—has three chapters of Trowbridge's capital boy story, doing his Best; an interesting article on the "Mystery of the Holy Cross," by N. A. Eliot; What shall we name our Baby? (poem) by Laura D. Nichols; The Goat and the Swing, poem and illus., by J. T. Trowbridge; The Calico Paper, by Elizabeth Stuart Phelps; and a heap of good things besides.

The Catholic World has among other papers: The Evolution of Life, Dante's Purgatorio, The Russian Ideas, My Cousin's Introduction, Madeline's Agony, Decrees on the Holy Scriptures, Myths and Myth-Gods, Wotan as a Bread-Winner, Fountainbleau, Bosnia—its People and Poems, "For Better or Worse," John Baptist de Rossi and his Archeological Works, and a Legend of S. Christopher. THE CATHOLIC PUBLICATION HOUSE, No. 9 Warren Street, New York.

A Chance for an Aspiring Boy.
Hon. H. WADSWORTH, of this Congressional district, having at his disposal an appointment to the Naval Academy at Annapolis, Md., has appointed a Board of Examiners, and given notice of a public examination to be held at Manchester, in this county, on Thursday, May 8th, on whose recommendation he will nominate. The examiners are: Hon. PERRY BILLS, of Tecumseh; LEON C. V. GRIDLEY, of Hillsdale; Dr. G. F. SUTWORTH, of Monroe; and Prof. E. C. HARRIS, of Niles. The candidates must be between 14 and 18 years of age, must weigh from 100 to 120 lbs. according to age, and the successful candidate will be required to report at Annapolis between the 20th and 30th of June—when he will be officially examined.

As the notice of the Manchester examination gives candidates no information of what the requirements are we quote from the regulations: Candidates for appointment as midshipmen must be between 14 and 18 years of age when examined for admission. All candidates for admission will be required to certify, on their precise age, to the Academic Board, previous to examination, and none will be examined who are over or under the prescribed age. They must be of good moral character, satisfactory testimonials of high school, college, or university, and testimonials from clergyman, instructors in colleges and high schools, and have special weight. They must pass a satisfactory examination before the Academic Board in reading, writing, spelling, arithmetic, and English Grammar. They will be required to write an original paragraph of English Writing and Spelling, they will write from dictation, in a legible hand, and spell with correctness, and read in writing; in Arithmetic, they will be examined in numeration and the addition, subtraction, multiplication, and division of whole numbers and vulgar and decimal fractions, and in proportion, or the rule of three; in Geography, they will be examined as to the leading grand divisions—the continents, oceans, and seas, the chief mountains and rivers, the boundaries and population of the chief nations, their government, capitals, and chief cities; in English Grammar, they will be examined as to the parts of speech and the elementary construction of sentences, and will be required to write an original paragraph of English Writing and Spelling, they will be examined as to the proficiency of the candidate in these branches is sufficient to qualify him to enter upon the studies of the Academy.

In addition there will be an examination by a medical board to test the physical capacity and fitness. The candidate designated by the Congress and passed by the Examining Boards of the Academy will be appointed as midshipman and paid his traveling expenses. He will be required to bind himself to remain in the service eight years including his probation at the Naval Academy, and if he resigns before the expiration of such term he will be required to refund the traveling expenses paid him. The pay of a midshipman before graduating or on shore duty or on sea-service is \$300 a year, and when on sea-service \$350 a year.

Does any Washtenaw boy wish to enter the content?
The Bank of England Forgeries.
The recovery of nearly a quarter of a million dollars in good ship from her canvas and upon a terrible sea shore, and the painter makes an attempt in vision the fate of the Atlantic. Then come, The Unbidden Guest, after the original of Mougint, a picture in contrast strange with the preceding; A Trout Brook, by Cassier; Six illustrations of New Orleans, The New Postoffice, Pacific Hotel, Michigan State and Rock Island, and the Depot, Chamber of Commerce, and Times and Tribune buildings, a series marking the wonderful work of but little more than a year; and then, The Drunken Fall, a noted fall in Thuringia, with other pictures.
