

Super Science

Across

4. a type of energy that generates a current - and gives us light!
5. the jelly-like part of a cell between the cell membrane and the nuclear membrane
7. a proposed explanation for an event that is often then tested!
9. a community of living organisms in a single major ecological region
11. the molecule that defines our genetic inheritance
12. the scientific study of the properties, distribution and effects of water on Earth

Down

1. this is where you might conduct scientific experiments!
2. the complete elimination of a species from Earth
3. fluid matter that is not a solid and not a gas!
4. a protein that increases the rate of a chemical reaction without being changed itself
6. a type of energy that involves heat moving molecules
8. energy that travels in waves that we can sometimes hear
9. this is the discipline of science that studies living things
10. this element is part of our atmosphere and animals need it to breathe!
